SUMMARY

Senior Data Analyst with 4 years of experience turning business questions into SQL data models, KPI definitions and stakeholder-facing dashboards. Strong in T-SQL, Power BI and data warehousing, with a track record of root-cause analysis and measurable efficiency gains. Builds end-to-end data products on Google Cloud (BigQuery) and a self-built MCP server in personal projects, and uses AI tools responsibly to prototype and improve reports before they are built.

EXPERIENCE

Senior Data Analyst, Turkish Aerospace – *Ankara, TR* Jul 2024 – Present

- Partnered with cross-functional stakeholders to translate business requirements into scalable data models and reporting solutions, and maintained documentation for reports and data models.
- Defined shared metric logic and KPI definitions with stakeholders, including the calculation of a custom productivity metric, establishing a single trusted source for performance reporting across teams.
- Built an automated performance data model and Power BI dashboard consolidating multiple real-time data sources, improving visibility into key metrics by 25%; recognized by external assessors as a "world-class" best-practice example in a company-wide excellence assessment.
- Conducted root-cause analysis on a rising operational cost metric, identifying the key drivers of inefficiency and delivering a 10% reduction through targeted process changes.
- Built dynamic backlog and inventory-availability reports, reducing fulfillment delays by 20%, and resource-planning dashboards fed by automated ETL pipelines, increasing utilization by 15%.
- Designed and maintained the SQL Server data modeling and transformation layer (stored procedures, scheduled jobs), delivering analysis-ready data with built-in validation (reconciliation, key-integrity and freshness checks).
- Optimized slow queries and stored procedures (execution plans, indexing, blocking diagnosis), restoring a failing daily KPI fact-table refresh by cutting a linked-server query from 15+ minutes to ~2.5 minutes with batched processing.
- Adopted a prototype-first, AI-assisted reporting workflow (Claude, Claude Design), validating designs with stakeholders as MVPs before build and increasing first-time-right report delivery.

Data Analyst — Digital Transformation, Turkish Aerospace – *Ankara, TR* Nov 2022 – Jul 2024

- Led the design of a real-time data-instrumentation architecture, connecting 60% of operational touchpoints and enabling real-time visibility into day-to-day operations.
- Built real-time monitoring dashboards (Grafana, SQL, ETL), improving data traceability and increasing operational efficiency by 30%.

PROJECTS

Training Performance Dashboard – *personal project, acozdemir.com/projects/training-performance-dashboard* Sep 2026 – Oct 2026

- Built an end-to-end data product on my own training data: a nightly Python pipeline on Google Cloud loads Strava API data into BigQuery and serves a web dashboard and a Looker Studio report (AI-assisted development with Claude Code).
- Defined the training-load metrics and validated them against an independent model (r = 0.955 per activity), with least-privilege access, monitoring alerts and 113 automated tests.

Self-built MCP Server: Garmin → Claude Health Data Bridge – *personal project (private, live on Cloudflare)*

- Built and deployed my own MCP server (Cloudflare Workers, D1, OAuth 2.1) giving Claude secure access to my Garmin data, fed by a scheduled pipeline from Garmin's official API with idempotent upsert loads and a 4-year backfill validated against the source app.

EDUCATION

B.Sc. Industrial Engineering, Hacettepe University – Ankara, TR (GPA: 3.54/4.0, High Honor) Oct 2017 – Jun 2022

Erasmus+ Exchange, Logistics & Supply Chain Management, University of Duisburg-Essen – Germany Apr 2021 – Sep 2021

CERTIFICATIONS & VOLUNTEERING

McKinsey Forward Program, McKinsey & Company May 2023

English Certificate of Proficiency (C1), iTEP Oct 2022

Innovation Ambassador, Turkish Aerospace Dec 2023 – Present

SKILLS

Languages: Turkish (Native), English (C1), German (A1)

SQL & Databases: MS SQL Server (T-SQL, stored procedures, scheduled jobs, execution plans & indexing), PostgreSQL, SQLite

Programming: SQL, Python, DAX

BI & Visualization: Power BI (data modeling, DAX, Power Query), Power BI Report Server, Report Builder, Looker Studio (project-based), Grafana, Excel (Pivot Tables, XLOOKUP, Power Query)

Data Engineering: ETL pipelines, data warehousing, data modeling (Star/Snowflake), data validation, Node-RED

Cloud (project-based): Google Cloud (BigQuery, Cloud Functions, Cloud Scheduler, Secret Manager, IAM), Cloudflare (Workers, D1, KV, Cron)

AI: MCP server development (OAuth 2.1), AI assistant workflow design (skills, connectors, scheduled tasks), AI-assisted reporting, Claude, Claude Code, Claude Design

Analytics: KPI & metric design, root-cause analysis, statistical analysis, time series, trend & variance analysis

Tools: Git/GitHub, Jira, Docker
